## ABOUT ME

First and foremost, I love writing codes. Ever since writing my first program in C at age of 12 and manipulating it to produce a desired output, I have been obsessed with the idea of using software to solve practical problems. And from C programming to moving on C++ then to Java and finally to Python my journey has been sooo life changing. \*Software engineering\* is a never ending puzzle that I am passionately engaged in solving, as there is always new challenges and new problems with the time and solving those real life problems with help of coding gives another level of satisfaction. I believe in the power of programming to transform and improve the lives of people around me and around the world.
